DETAILED ACTION

1. The indicated allowability of claims 24-37 is withdrawn in view of the new rejection.

2. Claims 24-37 are rejected under 35 U.S.C. 251 as being an improper recapture of broadened claimed subject matter surrendered in the application for the patent upon which the present reissue is based. See *Hester Industries, Inc. v. Stein, Inc.*, 142 F.3d 1472, 46 USPQ2d 1641 (Fed. Cir. 1998); *In re Clement*, 131 F.3d 1464, 45 USPQ2d 1161 (Fed. Cir. 1997); *Ball Corp. v. United States*, 729 F.2d 1429, 1436, 221 USPQ 289, 295 (Fed. Cir. 1984). A broadening aspect is present in the reissue which was not present in the application for patent. The record of the application for the patent shows that the broadening aspect (in the reissue) relates to subject matter that applicant previously surrendered during the prosecution of the application. Accordingly, the narrow scope of the claims in the patent was not an error within the meaning of 35 U.S.C. 251, and the broader scope surrendered in the application for the patent cannot be recaptured by the filing of the present reissue application.

The following amendments and/or remarks, filed 20 October 1997 (paper # 13), are gleaned from the allowance of the independent claims in the patent.

With respect to claim 1, pages 11-12 of the amendment, states that the "frequency modification of the received signals" defines over the prior art.

Art Unit: 3662

With respect to claim 9, at the top of page 13, it is stated that “the control means generates control signals for each transducer element that when combined with the electrical receive signal of that transducer element modifies the electrical receive signal in such a manner as to permit the simultaneous processing of the modified electrical receive signals from the plurality of transducer elements”.

With respect to claim 19, the third paragraph on page 13 states “the row and column control signals are combined with an active device”. Further it is stated that “frequency modification of the electrical receive signal” is new to the instant claim and is not disclosed by the prior art.

With respect to claim 25, note the limitations to a) generating image data, and b) generating an electrical receive control signal for each transducer element that contains an appropriate frequency and phase shift that when combined with that transducer element’s electrical receive signal permits the coherent combination of the electrical receive signals of each of the plurality of transducer elements”.

With respect to claim 26, note the limitations to a) “means ... for generating image data from ...”, and b) “means within said control logic for generating an electrical transmit control signal for each transducer element that contains a frequency based coded signal and cause each transducer to emit an acoustic signal representative of said coded signal, and c) means for modifying the frequency and phase for coherently combining reflected coded signals with the electrical receive signals thereof”.

With respect to the instant reissue claims none of the aforementioned limitations stated above are in any of the independent claims. Therefore, claims 24-37 are

Art Unit: 3662

rejected under 35 U.S.C. 251 as being an improper recapture of broadened claimed subject matter.
